

## Good Stuff from the ATAS Division for September and October, 2009

### Automotive Technology Cliff Meyer reports:

- The Automotive Technology classes visited the APEP National Fuel Cell Research Center at UCI. All of the students who attended were able to drive a Hydrogen powered Toyota Highlander and a GM Hydrogen powered SUV. The students had a wonderful experience. This is very special due to the fact that these cars are in very limited supply with only a few being tested by the public. Their value is in excess of \$500K due to the very limited production.

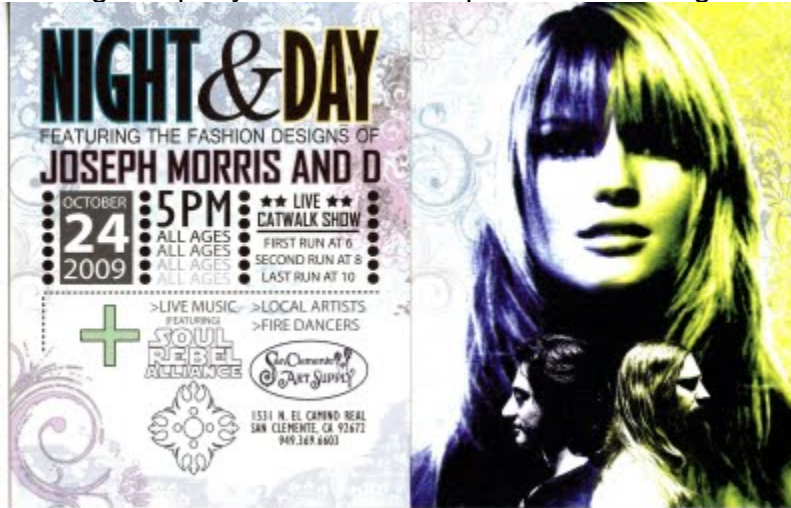

Instructor Cliff Meyer

### Fashion Design Lindsay Fox reports:

- The Fashion Department with Joseph Morris and Damien Mathis former Saddleback College fashion students put on a "**Day and Night: Fashion Show of Joseph Morris and Damien Mathis Designs**" in San Clemente. Many current and former Saddleback students were involved in set-up, artist booths, dressing the models, and modeling. The event

was on Oct 24th in the San Clemente Art Supply parking lot. People from the fashion industry, fire dancers and Kai Kalama from American Idol performing were all in attendance. 3 runway shows were completed and 11 local artists had booths at the event and will be selling their artwork. A local catering company "Grass Roots" provided catering.

Rapid Digital Manufacturing Ed Tackett reports:

- Saddleback student Tom Dorman from the Rapid Digital Manufacturing program was highlighted on this week's episode of Advanced Technological Education TV. Advanced Technological Education Television is an on-line video series with up to the minute information connecting students with education and employment opportunities, showcasing the best in Advanced Technological Education from community colleges and across the country.
