Translate the following phrase into a mathematical expression using \( x \) as the variable. Simplify the expression by combining like terms.

Twice the sum of five and a number, subtracted from three times the number.

\[
2(5 + x) - 3x
\]
Translate the following phrase into a mathematical expression using x as the variable. Simplify the expression by combining like terms.

The difference of a number and 3 added to three times the number.

\[ + (x - 3) \]
