Proposal Title: The Effect of Inoculate Rhizobium concentration on the formation of root nodules in the garden bean, *Phaseolus vulgaris*

Principal Investigators: John Q. Student and Mary P. Student

Investigator Background: John Student successfully completed BIO3A and is currently working on a degree in biology. Mary Student completed a project on the effect of temperature on cricket stridulation frequency in BIO 3A and is currently working towards transfer to UCSD.

Project Summary

In this section you should give a reasonable background for the project, including citations. All citations should be in the proper format (Huntley and Teh, 2004). If you got information from someone with no published reference, then this is called a personal communication (Huntley, pers. comm.). Please be sure to clearly state your testable hypothesis in this section. Smith (1994) states that all project proposals will be completed according to these format guidelines.

Project Description

This is the section where you explain how you will do the project. This section should really be a “Materials and Methods Section.” Do not list supplies here! Give a standard narrative of the method to be used. Please include a timeline for the project.

References

Cite all references in the standard format:

Budget

In this section you should indicate all equipment that you will use in the project, when you will need it, and who will provide it.
