

Face in Space

Congratulations!

This certifies that the face of Walter DeAgüero has flown in space aboard the Space Shuttle Discovery on mission STS-133 from February 24 - March 9, 2011. The face was flown on Discovery's mission to the International Space Station at an altitude of 220 miles above the Earth. It flew at a speed of more than 17,400 miles per hour as it orbited our planet. On behalf of my crew and all of NASA, we thank you for sharing the excitement of our mission and welcome your interest in space exploration. We were glad to have you aboard.

Steve Lindsey
STS-133 Commander Steven W. Lindsey

The background of the lower half of the page shows a large, dark silhouette of the Space Shuttle Discovery on the Mobile Launcher Platform, being moved by a crawler-transporter at night. The scene is illuminated by the warm glow of the setting or rising sun, with some lights visible on the ground.
